

# Activer SSH

- Se connecter au WebGUI de PFSense

- Onglet system -> Advanced
  - Cocher la case, « Enable Secure Shell »

A screenshot of the 'Secure Shell' configuration page in PFSense. The page has a dark header with the title 'Secure Shell'. Below the header, there are several sections: 'Secure Shell Server' with a checked checkbox 'Enable Secure Shell'; 'SSHd Key Only' with a dropdown menu set to 'Password or Public Key' and a descriptive text below it; 'Allow Agent Forwarding' with an unchecked checkbox and its description; and 'SSH port' with a text input field containing '22' and a note below it stating 'Note: Leave this blank for the default of 22.'

- Le port SSH est modifiable dans la section "SSH port"
