

Activer SSH

- Se connecter au WebGUI de PFSENSE

- Onglet system -> Advanced
 - Cocher la case, « Enable Secure Shell »

A screenshot of the 'Secure Shell' configuration page in PFSENSE. The page has a dark header with the title 'Secure Shell'. Below the header, there are several configuration sections. The first section is 'Secure Shell Server' with a checkbox 'Enable Secure Shell' which is checked. The second section is 'SSHd Key Only' with a dropdown menu set to 'Password or Public Key'. Below this dropdown is a text explanation: 'When set to Public Key Only, SSH access requires authorized keys and these access. If set to Require Both Password and Public Key, the SSH daemon req default Password or Public Key setting allows either a valid password or a va'. The third section is 'Allow Agent Forwarding' with a checkbox 'Enables ssh-agent forwarding support.' which is unchecked. The fourth section is 'SSH port' with a text input field containing '22'. Below this field is a note: 'Note: Leave this blank for the default of 22.'

- Le port SSH est modifiable dans la section "SSH port"
